`X = round_incremental_spiral(N,r0,d,phi0,RES,layers,h,x0,y0,z0,phix,phiy,phiz,view)`

This function generates a flat circular multilayer spiral - PCB Inductor geometry to be used as a coil. The coil will have enough layers to acomodate all N turns. The coil will be generated with center in (0,0,0) in XY plane. It can be moved using the x0,...,phix... parameters

Parameters

- @param **N** Number of Turns
- @param **r0** External radius of the coil
- @param **d** Distane bewtween turns
- @param **phi0** Angle at which the turns start
- @param **RES** Number of nodes of the Geometry (Discretization)
- @param **h** Total height of the coil
- @param **x0** Center position X
- @param **y0** Center position Y
- @param **z0** Center position Z
- @param **phix** Turn respect X axis
- @param **phiy** Turn respect Y axis
- @param **phiz** Turn respect Z axis
- @param **view** Optional parameter, if true generates figure with geometry
- @retval **X** Geometry nodes
